K12 Urologic Research Career Development Program

Program Overview

Welcome to the Wisconsin Multidisciplinary K12 Urologic Research Career Development Program Website

This NIH-funded program supports career development in benign urological research for MDs, PhDs, DVMs, or other doctorates.

Benign urological disorders such as urinary tract infection, overactive bladder, incontinence, and benign prostatic hypertrophy affect millions of Americans annually, resulting in well over a billion dollars in health care costs.

This program provides training that will prepare investigators to establish independent careers in research that will address these highly significant health issues.
